

Translink Environmental Policy

Translink's Corporate Statement of Vision is 'to provide a transformed network of coordinated bus and rail services which attracts a growing number of passengers, enjoys public confidence and is recognised for its quality and innovation'. With the knowledge that the use of public transport is often a substitute for travel by private car, Translink is contributing positively to environmental well-being and conservation of resources.

However, throughout our day-to-day operations we inevitably impact on the environment in a number of ways. Our aim is to understand these impacts at all levels and seek solutions to minimise any potentially harmful effects wherever and whenever possible, through sound principles and best practice. Translink is committed to continual improvement, the prevention of pollution, and will meet, and where appropriate exceed, all relevant legislative, codes of practice, and other requirements.

As part of our commitment to the pursuit of excellence in all that we do we have developed a comprehensive policy which will enable us to establish targets by which our efforts towards sustainable environmental improvement can be measured and monitored on a regular basis. This is supported with a targeted action plan updated annually and available to the public.

In this way we aim to protect the health and safety of our own people and our customers whilst contributing to the future well being of the environment.

Catherine Mason
Group Chief Executive of
NITHC and TRANSLINK
